

What's Protecting Your Home?

Transient Voltages from powerline surges and spikes from lightning, can destroy instantly or degrade electronic components over time.

Today, homes are filled with sensitive electronics that are easily damaged by common power surges, spikes or voltage impulses. A lightning storm near a residence can deliver a high energy electrical surge that can enter a home and destroy appliances, televisions, stereo equipment, and other electrical products.

Do not underestimate an unchecked high voltage surge that can wipe out your investment instantly, or the smaller everyday surges that can degrade the electronic components in your home slowly over time.

Intercept harmful surges before they have a chance to damage your valuable electronic devices.

Call Christian Electric Today and protect your home with a Main Panel Surge Suppressor.
